

Claims

1. Device for providing a drink from extracts, in particular tea extracts, comprising:
 - at least one container for an extractable mixture which is at least partially
- 5 permeable to drink and which container comprises at least two container parts pivotally connected to each other,
 - a cover connected to the container, which cover comprises at least two cover parts pivotally connected to each other, wherein each cover part is pivotally connected to a separate container part,
- 10 characterized in that the container is connected to the cover such that the device is pivotable between a folded-out active position, in which a substantial part of the container lies at a distance from the cover, and a folded-up non-active position, in which the container is at least substantially enclosed by the cover.
- 15 2. Device as claimed in claim 1, characterized in that each cover part is connected, at least close to a side remote from the adjacent cover part, to a part of the container part at least close to a side remote from an adjacent container part.
3. Device as claimed in either of the foregoing claims, characterized in that the
- 20 container is manufactured from a flexible material.
4. Device as claimed in any of the foregoing claims, characterized in that each container part is provided with at least one compartment for the mixture.
- 25 5. Device as claimed in any of the foregoing claims, characterized in that at least one cover part is provided with an incision extending to a side of the cover part for the purpose of positioning the device.
6. Device as claimed in claim 5, characterized in that the incision is given an at
- 30 least partial hook-like form.
7. Device as claimed in any of the foregoing claims, characterized in that the container is at least substantially non-permeable to the mixture.

8. Device as claimed in any of the foregoing claims, characterized in that the cover and the container are connected releasably to each other.
- 5 9. Device as claimed in claim 8, characterized in that the container is provided with coupling means for co-action with counter-coupling means forming part of the cover.
- 10 10. Device as claimed in any of the foregoing claims, characterized in that the container is provided with a closable filling opening for feed respectively discharge of the mixture.
11. Cover for use in a device as claimed in either of the claims 8 and 9.
- 15 12. Container for an extractable mixture for use in a device as claimed in either of the claims 8 and 9.
